In our country nearly one third of the loss of life are due to the lack of timely medical assistance. To reach a medical aid at an emergency situation is always been a hard task. In this paper we proposed a system that overcomes such hardships. The system serves by finding the nearby hospitals, pharmacies and laboratories. Also when we blood in emergency situations, we can find the nearby donors who were registered and the donors will be sent a notification. Also it provides the nearby scan centres and the cost of scans and tests in that centre. So that the user can find the affordable one nearby.
