

## **A SOCIAL NETWORKING SYSTEM FOR ENHANCING STUDENTS LEARNING EXPERIENCE**

Ragul.R and M Gokul Raj  
Panimalar Institute of Technology, Chennai, India

Social network is growing rapidly and becoming a vital part of everyday life. Social Networking system is a web-based application that allows users to connect with friends, family, classmates and to interact among them. But this social network is targeted mainly for a large group of people, but it mainly focuses on entertainment purpose, even if it is focused on educational purpose it is limited within a collage campus and their students. In our project we would overcome these limitations by creating a social networking system which is accessible by all the college students and staffs which will create a good rapport between them, our project provides all the recent updates and announcements made by different universities and colleges like off-campus details, conference, course materials etc. Our project will not only achieve the basic communication function but also provide a unified platform for the teaching, learning, researching and many other aspects of cultural life to teachers and students across different campus.
