In our country technology has been developed in many platforms and in many fields like agriculture, education, finance, business and so on, and these technologies help to save the manpower and time. As India has become a developed country and has a campaign Digital India, it lacks in the field of security. Everyone is aware of the corruption prevailing in the country. One of the sectors that is extremely affected by the corruption is the police FIR system where police men refuse to take FIRs as and when they wish to, or they can change the FIR reports whenever they want to. The Department of Indian Police has bought the First Information Report (FIR) complaints registration in a centralized online process to register the complaint. The main objective of this paper is to provide high level of security to the FIR system using Blockchain technology. This insists the future police Department to protect the FIR with the Blockchain technology. A Chabot is also introduced which is the main source for the communication.
