We propose a technique to detect the stolen or missed android based mobile phones by using SMS. This system is totally dependent on the hardware of the smart phones like camera and microphone. When the original SIM is changed with another SIM any number of time, each and every time the notification is sent to the registered number and E-mail. Using trap and shoot options from the registered number, the user gets location, snapshot images and the audio of the surroundings. TRAP option is used to get location of the mobile and SHOOT option is used to get images and audio.
